

### Invited Talk

The invited talk that i grabbed was a talk about the parks talk, because she talks about how the project it needs to be by and to the people if we talks about a citizen project.

She said that we need to meet with the people and ask what they need and looking for a solution of that requirement.

In our case we asked a few people and we saw what they actually need for better usability and better UI that becomes a better UX.

Now for get better UI we could do a form that ask what people would do to improve the especific part of the map giving them a toolt that they can move or put some characteristics about it.
